Fine Cut honored to volunteer on new Headquarters for Folds of Honor

The new 3 story building, for Folds of Honor Headquarters, will be located near the Patriot Golf Club in Owasso, OK and is being built entirely by members of the Associated Builders and Contractors of Oklahoma who have volunteered their time and materials.

Folds of Honor is a nonprofit organization that was founded almost 13 years ago. The donated building will be used for daily operations to help provide educational scholarships to the families of fallen and disabled service members and first responders who have paid the ultimate sacrifice. More than 44,000 educational scholarships have been awarded since 2007. The new facility is expected to open in the Spring of 2023.

The project for our operators consisted of drilling holes for plumbing and electrical with different size diameters and configurations (set ups) on the wall and slab on all three floors of the building. A couple slab saw entry approaches were also completed.

Fine Cut Drilling & Sawing was honored and proud to be a part of the project.

If you would like to donate to Folds of Honor, please visit their website at foldsofhonor.org.

Fine Cut Drilling & Sawing continues to invest in Training

Concrete Sawing & Drilling Association (CSDA) offers classroom courses throughout the year in several locations across the US where experts with some real-world experience share their expertise with either newly hired operators or anyone wishing to expand their knowledge. The courses have both classroom time and hands on experience so each of the participants receive the proper techniques to work safely and proficiently.

We are extremely proud that our Kansas City, MO Operations Manager, Clint Ralston was chosen as the CSDA Lead Trainer for both the CSDA 101 and 201 Classes. Ralston traveled to Diamond Products in Elyria, OH to share his 23 years of experience at the Concrete Sawing & Drilling 101 Course recently.

Two Kansas City, MO Operators Branden Crust and Joe Griffith were sent to the CSDA 101 Course held in Ohio. Branden has been with Fine Cut for 2 years and is a Certified Operator with the following certifications: OSHA 10, OSHA 30, eRail Safe and Forklift Trucks training. Joe has been with Fine Cut for 1.5 years and is a Certified Operator with the following certifications: OSHA 10 and OSHA 30.

Are your floors beat up or are you just looking to update to something new?

Professionally installed epoxy flooring has become popular with homeowners and commercial customers because it can transform your space and enhance the value of your home or office. It is affordable and can be customized with a variety of choices including solid color, design or created with a textured look to match the look of any room. Concrete epoxy flooring is easy to clean and maintain and it can be applied to bathrooms, garage floors, exterior patio areas, commercial kitchens and even walls because it is durable and sanitary.

Epoxy flooring is a great choice, if your concrete is damaged and has several cracks. It will help to repair the floor so that it is long-lasting, durable and chemical resistant.

Our team of professionals will inspect your floors and depending on the project can take a day or two to complete. The multi-step process consists of diamond grinding and concrete floor repair, applying the primer base coat and flakes and then applying the top coat to seal and create the smooth surface of the floor.

We provide service for Jackson and Cass Counties, so give us a call today, 816-540-5787 or visit our Fine Cut Grinding & Polishing website or Facebook page by visiting www.finecutusa.com

Crowder, Graham and Middlemas receive their OSHA 10 Certification recently

The OSHA 10 Training Program provides workers with basic and more advanced training about common safety and health hazards on the job. Students received an OSHA 10-hour course completion card at the end of the training. At Fine Cut Drilling & Sawing, employees are required to complete the OSHA 10 Training within the first 30 days of employment. OSHA 30 Training is required to be completed during the first year and CSDA Operator training is started within 2nd year of employment. *Congratulations guys!*
